

Fastgo targets is a Singapore based company that sources high quality EVA to make a range of the best archery targets currently on market. Created by an Australian archer, we know the importance of having high quality cost effective targets that will take care of expensive arrows.

**Target Butts** – These butts measure 1.26m by 1.26m by 19cm in thickness and comprise of multiple layers of soft Ethyl Vinyl Acetate interspersed with high density layers of the same material. This formula came about as the result of thousands of arrows of testing by archers in 3 different countries. Available either as a single center or multiple centers, these butts will handle all FITA target faces.

Single Center

4 Center

5 Center Indoor /Outdoor

9 Center

12 Center Indoor

**Field Targets** – Designed for use as FITA Field butts, these measure 1m by 1m.

The no center butt is designed specifically for the 20cm spot faces. It has an additional layer of EVA and is 23.5cm thick. It allows the 20cm faces to be placed anywhere on the target face.

The 5 center field butt is designed to give flexibility in field set up and allows either the 40cm faces or 60/80cm faces to be used on all replaceable centers.

## Replacement Centers

Fastgo Targets has an extensive range of centers. From the indoor size of 12cm to the multi center of 16cm and right up to the 25cm center normally found in the middle of the butt. All centers now have additional layers of harder penetration resistant EVA material and are inter-changeable regardless of whether you are using a field, home or target butt.

The 4 layer 250mm center comes standard with each targets but for a small additional cost, there is an option to order your target with a 6 layer center. By adding an additional 90mm of EVA, these centers are designed for greater longevity and cater particularly well to compound shooters with bow weights up to 60lb.
